Pages

On the next image and in your dashboard you can see new menu item called “Pages”. This is where you can organize and setup your pages.

Introduction

Using shortcodes, layout settings and custom sidebars, you can create completely different pages. Starting from, text based, “about” page to contacts and portfolio.

Despite the fact that our theme comes with different shortcodes to help you build your page, creating good looking page content still requires at least knowledge of basic html tags and understanding of html/css (http://www.w3schools.com/html/html_basic.asp).

A few tips how to create good looking content for your page:

1 Do not copy/paste shortcodes code. Use shortcode buttons. This is the most common problem, people always lose some pieces of code or trying to add in shortcode functionality that it doesn't has.

2 Use column shortcodes to organize your content. Add clear tag after each group of columns (but not after each column!).

3 Do not use fixed width when you add images or video. If you added video to page set it width to 100% and wrap it with column if you want change it width (display area).

Setting fixed height mean it will stay with the same height all the time, even on devices, what means it won't be responsive and will break your content.

Create Page

To create new page, go to **Pages -> Add new**

After that you'll see content editor (1), where you can find shortcode buttons (2) in visual mode, and lots of metaboxes (3-5) if you scroll down, below the editor. Metaboxes is where you can set different settings for your page, such as: set slideshow (5), sidebars(4,5), layout(3), seo, etc.

You can also set parent settings for pages (3). They will be used for building breadcrumbs or custom menu.

The screenshot shows the WordPress 'Add New Page' interface. On the left is a sidebar menu with options like Dashboard, Posts, Pages, Events, Galleries, Slideshows, Testimonials, Theme Options, Media, Links, Comments, Appearance, Plugins, Users, Tools, Settings, Performance, and SEO. The main content area is titled 'Add New Page' and includes a text input for 'Enter title here'. Below this is a rich text editor in 'Visual' mode, with a toolbar containing various formatting and media options. A large text area for the page content is below the editor. At the bottom of the main area, there are fields for 'Path' and 'Word count'. To the right of the main editor are several metaboxes: 'Publish' (with 'Save Draft' and 'Preview' buttons), 'Page Attributes' (with 'Parent' and 'Template' dropdowns), 'Custom sidebar' (with 'Use global sidebar' dropdown), 'Featured Image' (with 'Set featured image' link), 'Slideshow options' (with 'Select a slideshow type', 'Select a slider category', and 'How many slides to display' fields), and 'Slideshow effect options'. Numbered callouts are placed over the interface: 1 points to the main content editor area, 2 points to the toolbar, 3 points to the 'Template' dropdown in the Page Attributes metabox, 4 points to the 'Use global sidebar' dropdown in the Custom sidebar metabox, and 5 points to the 'Title additional text' field in the Page Map metabox.

Page Attributes

Parent

Need help? Use the Help tab in the upper right of your screen.

Custom sidebar

Use global sidebar ▼

Set layout and Sidebar for Page.

You can set one of three possible layouts for page: Full width, Left Sidebar and Right Sidebar. You can select layout from “Template” drop down at the right side in “Page Attributes” block.

After you set layout, for example “Right sidebar”, you need something to be displayed in that sidebar, so you need to set your sidebar in “Custom sidebar” block at the right side of the page edit screen.

You can create custom sidebars in [Theme Options -> Sidebars](#).

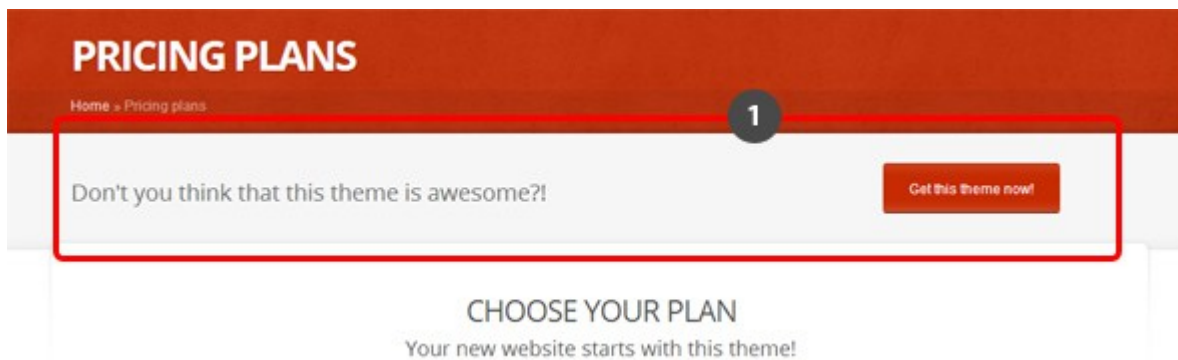

Additional Widget Area

There is additional widget area between title and content. You can enable it by choosing **Under title sidebar instance** in “Title area settings” block below the editor.

Under title sidebar instance

Use global sidebar ▼

You can see example of additional widget area (1) on the image below:

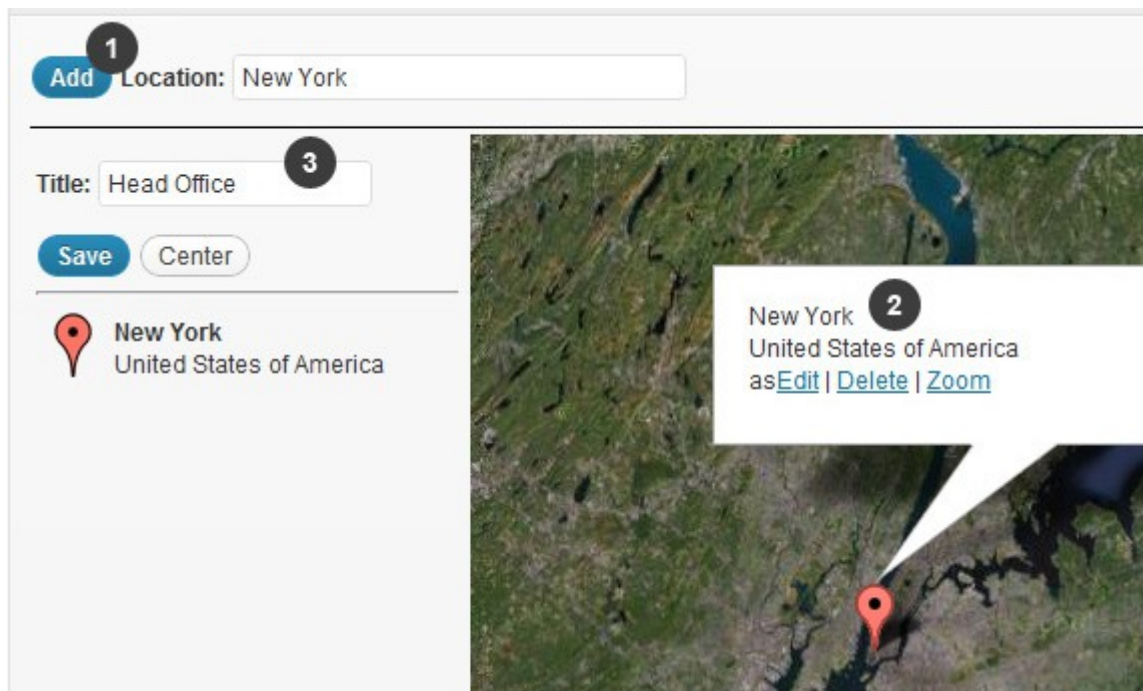

You can learn more about layouts, sidebars and widgets [here](#).

Page Map

You can set map in title area for any post/page.

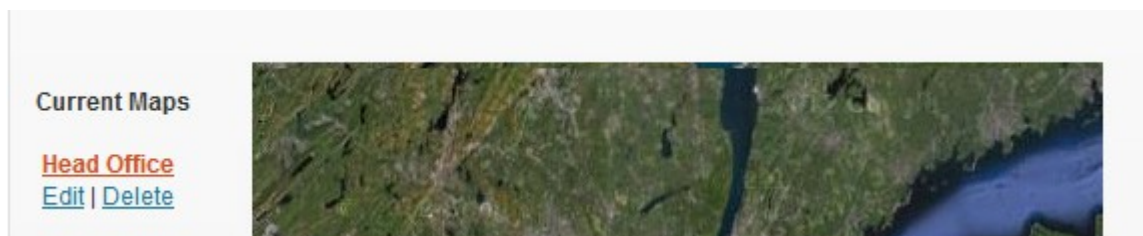

Simply click **New map**.
After that new options will appear.

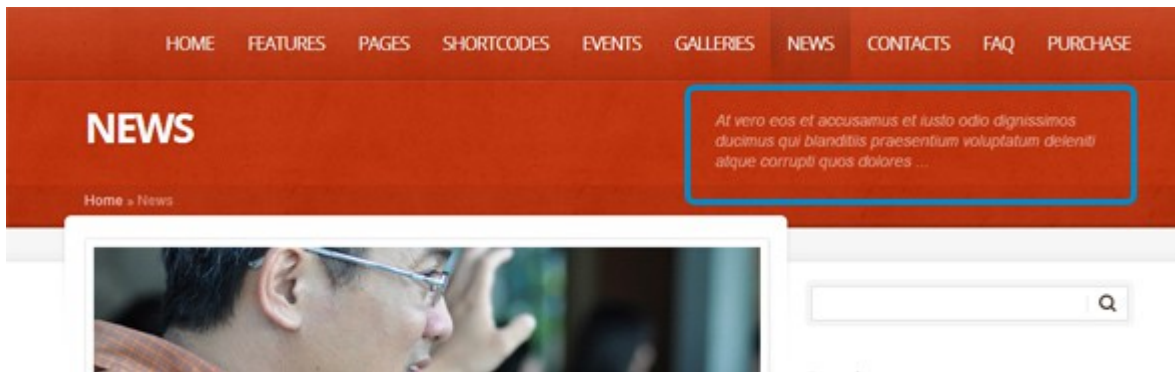

1. Type your location and click **Add** button. You will see a pin with popup on the map.
 2. You can edit address in popup on the map by clicking “edit” link directly in popup.
 3. Add title for this location and press **Save** button to save location.
- Now you have a location on the map.

You can edit this location at any time. To do that rollover on location title and edit link will appear.

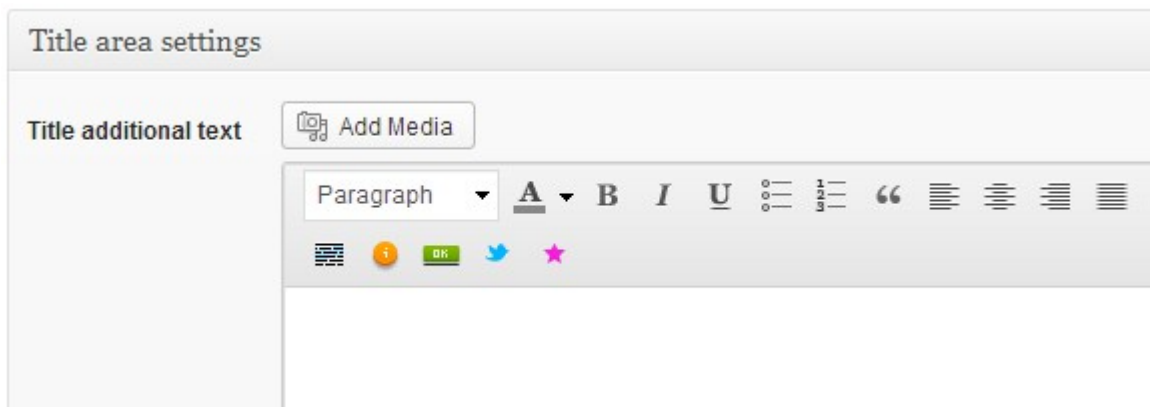

Title additional text

You can set some short description in the title area on the right side, as you can see on the image below.

To add this descriptions simply add your text in “Title additional text” field. This option can be found below the editor on the page edit screen.

Slideshow Settings

Our theme is extremely flexible and allows to set unique slideshow, with unique settings for each post/page or taxonomies.

Please note that this settings will be applied ONLY for the specific page/post, where you set it and not for the other pages/posts.

To set slideshow for specific page, scroll down to the “Slideshow options” block.

1. **Choose slideshow type** – here you can between our custom JCycle or Revolution slideshows. By default it is set to use global settings (global settings is set in Theme Options -> Slideshows)
2. Choose Revolution Slider (for revolution slider only) – you can create many revolution slideshows, so here you can choose which of revolution slideshows you would like to use.
2. Set slideshow category (for jCycle only)
3. and set max amount of slides for this slideshow (for jCycle only).

Slideshow options	
Select a slideshow type for current page	Use global <input type="button" value="v"/>
Choose Revolution slider	main <input type="button" value="v"/> <i>Choose Revolution slider</i>
Select a slider category	contacts <input type="button" value="v"/>
How many slides to display:	4 <i>Set a number of how many slides you want</i>

You can also adjust different slideshow options specifically for this page in “Slideshow effect options” block, such as (these options is for jCycle only):

1. Set slideshow Height.
2. Turn on/off next, previous navigation arrows.
3. Remove paddings
4. Set timeouts and speed
5. Set autoplay and pause on rollover.

Slideshow effect options	
Slideshow timeout	6000 <i>Milliseconds between slide transitions</i>
Next/Prev navigation	<input type="checkbox"/> <i>Check to show Next/Prev navigation for slideshow</i>
Slideshow fixed height	<input type="text"/> <i>Set custom fixed slideshow height</i>
Remove top and bottom paddings from slideshow	<input type="checkbox"/> <i>Check to remove top and bottom paddings from slides</i>
Slideshow pause	<input type="checkbox"/> <i>On to Slideshow pause enable "pause on hover"</i>
Disable autoplay	<input type="checkbox"/> <i>"On" to disable Slideshow autoplay</i>
Slideshow speed	1000 <i>Speed of the transition(Milliseconds)</i>
